

Irene Cristofori

As assistant professor at the University Claude Bernard Lyon 1 and Institute of Cognitive Sciences Marc Jeannerod (Lyon, France), I am the director of the Master 2 Sensory Neurosciences and Analysis <https://masterneuro.univ-lyon1.fr/paths/m2sna-main/and> I am at the Head of the International Fellowship Program of the Neurosciences Graduate School “from Neurons to Brains”. My research focuses on social cognition and behavior, with the goal of better understanding human relationships, beliefs, and their complex cognitive and neural foundations. To this aim, my work integrates insights and methods from psychology and social/affective neuroscience. I use a range of multimodal neuroscience techniques—from behavioral experiments to functional and structural brain imaging—to investigate the mechanisms underlying individual differences in social interactions.
