

Herbert Strobl

Key Researcher

Otto Loewi Research Center, Medical University Graz

ORCID ID: <https://orcid.org/0000-0002-8070-4977>

SCIENTIFIC & ACADEMIC CAREER

2018-	Head, Division of Immunology at Otto Loewi Research Center, Med U Graz
2018-2021	Elected head of Otto Loewi Research Center, Med U Graz (founding period)
2015-2018	Head, Institute of Immunology and Pathophysiology, Med U Graz
since 2012	Full Professor for Immunology, Med U Graz
2001-2012	Tenured Assoc. Professor, Institute of Immunology/VIRCC, U/Med U Vienna
1999/2001	Board certified Clinical Immunologist and Venia Docendi in Immunology
1998-2001	Postdoctoral researcher, Nolan Lab, Stanford U, CA, USA
1996-1998	Clinical training, General hospital and Lainz hospital Vienna
1991-1998	Training in Immunology, Mentor W. Knapp; Inst. of Immunology, U Vienna
1991	MD, University of Vienna, pre-doctoral training in Immunology

MAIN AREA OF RESEARCH

Herbert Strobl studies the molecular and cellular mechanisms underlying immunological tolerance. His laboratory pioneered the *in vitro* generation of epithelial Langerhans-type dendritic cells (LC), by demonstrating that the prototypic anti-inflammatory cytokine TGF- β 1 induces LC differentiation at the expense of monocyte/macrophages in cultures of human CD34 $^{+}$ hematopoietic progenitor/stem cells. His lab then went on studying TGF- β family signaling processes in LC differentiation and function using human and murine models. In recent studies they identified transcription factors and miRNAs regulating myeloid and DC subset identity and differentiation during steady-state and inflammation. Aging favors the generation of pro-inflammatory myeloid cell differentiation at the expense of anti-inflammatory/tolerogenic DCs and lymphocytes, and these processes may contribute to the pathogenesis of several age-related inflammatory and metabolic diseases as well as cancer. Within MetAGE, Herbert Strobl aims to decipher the molecular mechanism underlying age- related changes in hematopoietic stem/progenitor cells leading to altered leukocyte differentiation and how these processes might contribute to enhanced susceptibility to infections and to reduced vaccination responses during aging.

ADDITIONAL RESEARCH ACTIVITIES (10 most important)

1998-present	Acquisition of 12 competitive third-party funded research grants (€ ~4.7 Mio)
2001-2012	Member in study groups in leukemia/lymphoma diagnosis (EGIL, BFM)
Since 2009	Subcommittee member IUIS nomenclature of blood monocytes and dendritic cells
Since 2007	Faculty member in several FWF PhD DK and Doc fund programs

Selected Presentations

- 2017 Keystone symposium: TGF-beta in immunity, inflammation and cancer, January 9-13, 2017
- 2016 Else-Körner-Lecture, Würzburg, July 18, 2016
- 2013 Keystone symposium: Understanding dendritic cell biology to advance disease therapy, March 3-8, 2013

Honors & Awards

- 2015-2017 Member of the Academic Senat of Medical University of Graz
- 2013 & 2014 Karl Landsteiner Prize for Strobl lab publications to lab members
- 2008-2013 Member of the Austrian Academy of Science (Junge Akademie)
- 2000 START Prize, FWF and Austrian Government
- 1998 Erwin Schrödinger Postdoc Fellowship FWF
