

Workshop Title: Linguistic Networks

Workshop Description:

Thanks to the Internet, networking plays an essential role all over the world today. Based on a general definition, networking is the establishment of connections between originally independent elements or systems. Networking can emerge in diverse fields of science (see ecology, sociology, pedagogy, mind and brain research, etc.). In this workshop, the questions to be addressed are the aspects of networks in linguistics and the linguistic disciplines they are relevant to. For this reason, the focus of the workshop is on networks of linguistic units. The workshop is aimed at all researchers who work primarily on linguistic issues of a theoretical or empirical nature in relation to linguistic networking. In particular, young researchers are also addressed. Contributions can cover one or more levels of linguistic networks, such as linguistic variation, linguistic innovation, social and linguistic networks, linguistic and cultural networks/systems, cultural and linguistic relationships, interconnectedness of languages, interconnectedness of words and concepts, etc. Abstracts on these subject areas should be no more than 300 words (excluding references and figures). Please send your abstract to renata.kriston@uni-miskolc.hu by 9/15/2023.

Planned articles: approx. 10

Name and contact details of workshop leader: Dr. Renata Kriston, renata.kriston@uni-miskolc.hu
