Hofrat Prof. Dr. Karl FRITSCH
(* 24.2.1864 in Wien, † 17.1.1934 in Graz)

Karl FRITSCH studierte nach einem Jahr in Innsbruck an der Universität Wien Botanik und wurde dort 1886 zum Dr.phil. promoviert; 1890 habilitierte er sich. Nach Anstellungen in Wien wurde FRITSCH 1900 als Professor für Systematische Botanik an die Universität Graz berufen, wo er aus bescheidenen Anfängen ein Institut aufbaute. 1910 wurde er Direktor des Botanischen Gartens, 1916 wurde das neu errichtete Institutsgebäude bezogen. Aus der sehr breiten wissenschaftlichen Tätigkeit sind vor allem drei Schwerpunkte hervorzuheben: Floristisch-systematische Studien, besonders zur Flora von Österreich, monographische Arbeiten (besonders über *Gesneriaceae*) und Arbeiten zur systematischen Stellung und Gliederung der Monocotylen. An Kryptogamen interessierten ihn besonders Pilze und Myxomyceten.

Herwig TEPPNER

Die Serie FRITSCHIANA wurde als Publikationsorgan für die zahlreichen Aktivitäten im Zusammenhang mit der botanischen Sammlung des Institutes für Pflanzenwissenschaften, Bereich Systematische Botanik und Geobotanik (vormals Institut für Botanik), der Karl-Franzens-Universität Graz (GZU) gegründet. Vor allem Schedae-Hefte der von den Mitarbeitern herausgegebenen Exsiccataenwerke sollten hier erscheinen, aber auch Exkursionsberichte sowie Listen und Indices besonders wertvoller Bestände in GZU. Das Spektrum wurde mittlerweile auf floristische und kleinere taxonomische Arbeiten (zwischenzeitlich auch auf das Samentauschverzeichnis des Botanischen Gartens) ausgeweitet. Die Schedae-Hefte des von Prof. Dr. Josef POELT begründeten, inzwischen abgeschlossenen Exsiccataenwerkes *Plantae Graecenses* sind die Vorläufer dieser Schriftenreihe.

Josef HAFELLNER*

HAFELLNER J. 2012: Lichenicolous Biota (Nos 101–120). – Fritschiana (Graz) 74: 1–17. - ISSN 1024-0306.

Abstract: The fifth fascicle (20 numbers) of the exsiccata “Lichenicolous Biota” is published. The issue contains material of 20 non-lichenized fungal taxa (14 ascomycetes [admixtures not counted], 1 basidiomycete, 5 anamorphic fungi). The fascicle includes isotype material of *Opegrapha hellespontica* Vondrák & Kocourk. (no. 106) and collections of the type species of *Asterocephoma* (*A. mazaediicola*), *Lichenosticta* (*L. alcicornaria*), *Microcalicium* (*M. disseminatum*), *Nesolechia* (*N. oxyspora*), *Nigropuncta* (*N. rugulosa*), *Phacothecium* (*P. varium*), *Telogalla* (*T. olivieri*), and *Xanthoriicola* (*X. physciae*).

Introduction

The exsiccata “Lichenicolous Biota” is continued with fascicle 5 containing 20 numbers.

The exsiccata covers all lichenicolous biota, i.e. it is open to non-lichenized and lichenized fungi, but also to myxomycetes, bacteria, and even animals, whenever they cause a characteristic symptom on their host (e.g., discoloration or galls). Consequently, the exsiccata contains both highly host-specific and plurivorous species, as long as the individuals clearly grow upon a lichen and the collection is homogeneous, so that identical duplicates can be prepared.

The five complete sets are sent to herbaria of the following regions: Central Europe (Graz [GZU]), Northern Europe (Uppsala [UPS]), Western Europe (Bruxelles [BR]), North America (New York [NY]), Australasia (Canberra [CANB]). Incomplete sets will preferably be distributed to Barcelona [BCN], Edinburgh [E], Munich [M], Prague [PRM], and St. Petersburg [LE] (herbarium acronyms sec. HOLMGREN et al. 1990, continued and updated as electronic database by THIERS 2011, onwards and hosted at New York Botanical Garden <http://sciweb.nybg.org/science2/IndexHerbariorum.asp>). It is planned to publish at least one fascicle per year, consisting of a variable number of decades.

For the 5th issue, I gratefully acknowledge the contribution of 1 collection each by Rainer Cezanne and Marion Eichler, Walter Obermayer, and Jan Vondrák. In fieldwork I received support by Angela Hafellner, Lucia Muggia, Walter Obermayer, and Regine Stordeur. Rainer Cezanne, Marion Eichler, Bettina Heuchert and Jan Vondrák contributed to the scientific content of the fascicle by the identification of either lichenicolous fungi or hosts. Christian Scheuer, Walter Obermayer, and Helmut Mayrhofer are thanked for critically reading the manuscript.

I would be much obliged to colleagues who send material of lichenicolous biota for distribution in future fascicles. The collections should be divided up into at least 5 (up to 10) duplicates, preferably already prepared. Unprepared collections should be rich enough to obtain at least 5 duplicates.

Hafellner J. 2012: Lichenicolous Biota (Nos 101–120). - Fritschiana 74: 1–17.

101. *Abrothallus parmeliarum* (Sommerf.) Nyl.

in Bull. Soc. Linn. Normandie, 2^e sér., 3: 12 (1869). – Bas.: *Lecidea parmeliarum* („*parmeliorum*“) Sommerf. in Suppl. Fl. Lappon.: 176 (1826). – Syn.: *Buellia parmeliarum* (Sommerf.) Tuck. in Synopsis North American Lichens 2: 106 (1888). – *Buellia parmeliarum* (Sommerf.) Fink in Lichen Fl. United States: 372 (1935).

Host: *Parmelia saxatilis* (thallus)

Europe, Austria: Steiermark (Styria), Eastern Alps, Steirisches Randgebirge, Grazer Bergland, Burgstaller Höhe NNE of the village St. Radegund, southern edge of the plateau c. 1.5 km W above the village Garrach, 47°13'10"N / 15°30'55"E, c. 1050 m alt., mixed deciduous forest above the SW-facing limestone cliffs, on bark of *Fagus sylvatica*.

Note: Two species of *Parmelia* s. str. (*Parmelia omphalodes* and *P. saxatilis*) are mentioned in the protologue as host species. A lectotype has not been designated so far.

102. *Asterophoma mazaediicola* D.Hawksw.

in Bull. Brit. Mus. (Nat. Hist.), Bot. ser., 9(1): 8 (1981).

Host: *Calicium trabinellum* (apothecia)

Europe, Austria: Kärnten (Carinthia), Eastern Alps, Steirisches Randgebirge, Koralpe NE of the town Wolfsberg, by the trail from the refuge Stoffhütte to the mountain Bärofen, 46°53'15"N / 15°00'50"E, c. 1560 m alt., GF 9156/1, coniferous forest on gentle slope exposed to the N, on rotting stumps.

Note 1: *Calicium trabinellum* is the type host of *Asterophoma mazaediicola*.

Note 2: *Asterophoma mazaediicola* is likely to represent an anamorphic state of a *Chaenothecopsis* species (see Tibell, Can. J. Bot. 69: 2427–2433, 1991).

Hafellner J. 2012: Lichenicolous Biota (Nos 101–120). - Fritschiana 74: 1–17.

103. *Lichenosticta alcicornaria* (Linds.) D.Hawksw.

in Hawksworth et al., Lichenologist 12(1): 107 (1980). – Bas.: *Microthelia alcicornaria* Linds. in Q. J. Microsc. Sci., n. s., 9: 349 (1869). – Syn.: *Dendrophoma alcicornaria* (Linds.) Vouaux in Bull. Soc. Mycol. France 30: 283 (1914).

Host: *Cladonia coniocraea* (thallus)

Europe, Austria: Kärnten (Carinthia), Eastern Alps, Steirisches Randgebirge, Koralpe NE of the town Wolfsberg, by the trail from the refuge Stoffhütte to the mountain Bärofen, 46°53'15"N / 15°00'50"E, c. 1560 m alt., GF 9156/1, coniferous forest on gentle slope exposed to the N, on rotting stumps.

Note 1: The type host of *Lichenosticta alcicornaria* is *Cladonia foliacea* (sub *C. alcicornis*).

Note 2: The genus *Lichenosticta* is based on *L. podetiicola* Zopf, a later heterotypic synonym of *Microthelia alcicornaria* Linds.

104. *Lichenostigma rugosa* G.Thor

in Lichenologist 17: 269 (1985).

Host: *Diploschistes scruposus* (thallus, apothecia)

Europe, Slovenia: Eastern Alps, Kobansko, Koralpe, mountain top ('Jantschkifels') 7.6 km NE above the town Dravograd (Unterdrauburg), W above the chapel Sv. Urban, uppermost slopes exposed to the S just below the summit close to the border to Austria, 46°39'08"N / 15°03'49"E, c. 1360 m alt.; scattered boulders of garnet schist on clearings in the spruce forest, on inclined rock faces of the boulders.

Note: The type host of *Lichenostigma rugosa* is a *Diploschistes* only determined to genus level.

105. *Microcalicium arenarium* (Hampe ex A.Massal.) Tibell

in Bot. Notiser 131: 237 (1978). – Bas.: *Cyphelium arenarium* Hampe ex A.Massal. in Miscell. Lich.: 50 [20] (1856). – Syn.: *Phacotium arenarium* (Hampe ex A.Massal.) Trevis. in Flora (Regensburg) 45: 5 (1862). – *Coniocybopsis arenaria* (Hampe ex A.Massal.) Vain. in Acta Soc. Fauna Flora Fenn. 57(1): 75 (1927). – *Caliciella arenaria* (Hampe ex A.Massal.) Fink in Lichen Fl. United States: 72 (1935).

Host: *Psilolechia lucida* (thallus)

Europe, Slovenia: Eastern Alps, Kobansko, Koralpe, Bistrica (Feistritz) valley c. 9.5 km NW of Muta (Hohenmauthen), by the trail along the S (= orographically right) river bank opposite to the Austrian customs hut, 46°39'19"N / 15°07'07"E, c. 470 m alt., outcrops of soft schist exposed to the N in deciduous forest, on overhanging rock faces.

Note 1: The species originally was not recognized as being lichenicolous or algicolous.

Note 2: There is no indication that the diagnosis of the species was provided by Hampe. Therefore the name has to be attributed to the author of the publication (ICBN Art. 46.2).

Note 3: For lectotypification and heterotypic synonyms see Tibell (Bot. Notiser 131: 237, 1978).

Hafellner J. 2012: Lichenicolous Biota (Nos 101–120). - Fritschiana 74: 1–17.

115. *Paranectria oropensis* (Ces.) D.Hawksw. & Piroz.

in Can. J. Bot. 55: 2555 (1977). – Bas.: *Sphaeria Nectria oropensis* Ces. in Rabenhorst, Bot. Zeitung 15: 406 (1857); Rabenhorst, Herb. Mycol., ed. 2, no. 524 (1863). – Syn.: *Nectria oropensis* (Ces.) Tul. & C.Tul. in Sel. Fung. Carp. 3: 95 (1865). – *Ciliomyces oropensis* (Ces. in Rabenh.) Höhn. in Sitzungsber. Akad. Wiss. Wien, Math.-Naturwiss. Kl. 115: 25 (1906).

Host: *Phaeophyscia orbicularis* (thallus)

Europe, Austria: Steiermark (Styria), Eastern Alps, Murberge, small valley SE below the castle Rothenfels, c. 1.5 km SE of the town Oberwölz, 47°11'50"N / 14°18'15"E, c. 860 m alt., GF 8851/2; riparian forest stripe, on bark of *Salix* spec.

Note: Infections with this aggressive lichenicolous fungus are of considerable importance as a succession factor in corticolous lichen synusiae, comparable to that of *Athelia arachnoidea*. (compare Hafellner & Obermayer, Herzogia 22: 177–190, 2009).

Hafellner J. 2012: Lichenicolous Biota (Nos 101–120). - Fritschiana 74: 1–17.

116. *Phacographa zwackhii* (A.Massal. ex Zwackh) Hafellner

in Biblioth. Lichenol. 100: 108 (2009). – Bas.: *Leciographa zwackhii* A.Massal. ex Zwackh in Flora (Regensburg) 45: 571 (1862). – Syn.: *Opegrapha zwackhii* (A.Massal. ex Zwackh) Källsten ex Hafellner in Herzogia 10: 15 (1994).

Host: *Phlyctis argena* (thallus)

Europe, Austria: Steiermark (Styria), Eastern Alps, Niedere Tauern, Triebener Tauern S of the town Trieben, gentle slope on the northern foot of Großer Grießstein, S above the wayside shrine near the farm Eberl, 47°24'35"N / 14°33'05"E, c. 1160 m alt., GF 8553/3, managed spruce forest with some scattered sycamore maples, on bark of *Acer pseudoplatanus*.

Note 1: *Phlyctis argena* is the type host of *Phacographa zwackhii*.

Note 2: For a detailed treatment of the species see Hafellner, Biblioth. Lich. 100: 108–110 (2009).

15. VIII. 2000

Hafellner J. 2012: Lichenicolous Biota (Nos 101–120). - Fritschiana 74: 1–17.

117. *Sagediopsis fissurisedens* Hafellner

in Herzogia 9(3–4): 757 (1993).

Host: *Aspidia myrinii* (thallus)

Europe, Austria: Steiermark (Styria), Eastern Alps, Steirisches Randgebirge, Koralpe, Seespitz, southeastern slopes short below the summit, 46°47'20"N / 14°58'45"E, c. 2050 m alt., GF 9255/2; outcrops of mica schist in alpine meadows, on inclined rock faces near the ground.

Note 1: *Aspilidea myrinii* is the type host of *Sagediopsis fissurisedens*.

Note 2: The lichenicolous lichen *Protoparmelia phaeonesos* Poelt is also present on the specimens distributed to the herbaria GZU, NY and UPS.

118. *Sphaerellothecium parmeliae* Diederich & Etayo

in Etayo & Diederich, Lichenologist 30: 117 (1998).

Host: *Parmelia saxatilis* (thallus)

Europe, Austria: Kärnten (Carinthia), Eastern Alps, Steirisches Randgebirge, Koralpe E of Wolfsberg, western slopes of the ridge between Weberkogel and Handalpe, 46°50'55"N / 15°00'45"E, c. 1740 m alt., GF 9156/3; small cliffs of mica schist at the actual tree line, on steep rock faces exposed to the W.

Note: *Parmelia saxatilis* is the type host of the species.

119. ***Stigmidium fuscatae* (Arnold) R.Sant.**

in Thunbergia 6: 17 (1988). – Bas.: *Arthopyrenia fuscatae* Arnold in Flora (Regensburg) 57: 139 (1874). – Syn.: *Pharcidia lichenum* f. *fuscatae* Arnold in Verh. Zool.-Bot. Ges. Wien 22: 302 (1872) (description, but name not validly published, ICBN 43.1.). – *Pharcidia fuscatae* (Arnold) Vouaux in Bull. Soc. Mycol. France 28: 237 (1912).

Host: *Acarospora fuscata* (thallus, apothecia)

Europe, Austria: Steiermark (Styria), Eastern Alps, Steirisches Randgebirge, Grazer Bergland, in the gorge Raabklamm W of the town Weiz, orographically left slopes, rocky terrain rib N opposite to the castle Gutenberg, 47°12'55"N / 15°34'07"E, c. 560 m alt., GF 8759/3; cliffs of siliceous schist in open mixed forest, on inclined rock faces.

Note 1: *Acarospora fuscata* is the type host of *Stigmidium fuscatae*.

Note 2: *Polycoccum microsticticum* (Leight.) Arnold is also present on the specimen in GZU.

Lichenicolous Biota (Nos 121–150)

Josef HAFELLNER*

HAFELLNER J. 2012: Lichenicolous Biota (Nos 121–150). – Fritschiana (Graz) 74: 19–41. - ISSN 1024-0306.

Abstract: The sixth fascicle (30 numbers) of the exsiccata 'Lichenicolous Biota' is published. The issue contains material of 29 non-lichenized fungal taxa (17 ascomycetes, 6 basidiomycetes, 6 anamorphic fungi), including isotype material of *Abrothallus parmotrematis* Diederich (no. 131), *Endococcus thelommatis* Kocourk. & K.Knudsen (no. 136), *Laetisaria lichenicola* Diederich et al. (no. 137), *Trimmatostroma dendrographae* Diederich et al. (no. 129), and of *Trimmatostroma quercicola* Diederich et al. (no. 149), as well as isoneotype material of *Briancoppinsia cytospora* (Vouaux) Diederich et al. (no. 133), representing the type species of *Briancoppinsia*, and paratype material of *Trimmatostroma dendrographae* (no. 130). Collections of the type species of *Cercidospora* (*C. macrospora*, syn. *C. ulothii*), *Marchandiobasidium* (*M. aurantiacum*), *Phaeopyxis* (*P. punctum*), *Rhagadostoma* (*R. lichenicola*, syn. *R. corrugatum*), *Stigmidium* (*S. schaeereri*), *Telogalla* (*T. olivieri*), and *Xanthoriicola* (*X. physciae*) are also included in this fascicle.

Introduction

The exsiccata 'Lichenicolous Biota' is continued with fascicle 6 containing 30 numbers.

The exsiccata covers all lichenicolous biota. The exsiccata is open to non-lichenized and lichenized fungi, but also to myxomycetes, bacteria, and even animals, whenever they cause a characteristic symptom on their host (e.g., discoloration or galls). Consequently, the exsiccata contains both highly host-specific and plurivorous species, as long as the individuals clearly grow upon a lichen and the collection is homogeneous, so that identical duplicates can be prepared.

The five complete sets are sent to herbaria of the following regions: Central Europe (Graz [GZU]), Northern Europe (Uppsala [UPS]), Western Europe (Bruxelles [BR]), North America (New York [NY]), Australasia (Canberra [CANB]). Incomplete sets will preferably be distributed to Barcelona [BCN], Edinburgh [E], Leningrad [LE], Munich [M], and Prague [PRM] (herbarium acronyms sec. HOLM-

GREN et al. 1990, continued and updated as electronic database by THIERS 2010, onwards and hosted at New York Botanical Garden <http://sciweb.nybg.org/science2/IndexHerbariorum.asp>). It is planned to publish at least one fascicle per year, consisting of a variable number of decades.

For the 6th issue, I gratefully acknowledge the contribution of 13 collections by Paul Diederich (partly together with Damien Ertz), 2 collections by Walter Obermayer, 2 collections by Toby Spribille (together with L. Yakovchenko), and 1 collection each by Brian Coppins, Damien Ertz, Siegfried Huneck(†), Kerry Knudsen (together with S. Chaney, sent by Jana Kocourková), James Lendemer, and Rolf Santesson. In fieldwork I received support by Roderick Rogers. Brian Coppins, Paul Diederich, Damien Ertz, Jana Kocourková, James Lendemer, and Toby Spribille contributed to the scientific content of the fascicle by the identification of either lichenicolous fungi or hosts. Christian Scheuer, Walter Obermayer, and Helmut Mayrhofer are thanked for critically reading the manuscript.

I would be much obliged to colleagues who send material of lichenicolous biota for distribution in future fascicles. The collections should be divided up into at least 5 (up to 10) duplicates, preferably already prepared. Unprepared collections should be rich enough to obtain at least 5 duplicates.

Hafellner J. 2012: Lichenicolous Biota (Nos 121–150). - Fritschiana 74: 19–41.

121. *Dactylospora lobariella* (Nyl.) Hafellner

in Nova Hedwigia Beih. 62: 118 (1979). – Bas.: *Lecidea lobariella* Nyl. in Flora (Regensburg) 52: 296 (1869). – Syn.: *Buellia lobariella* (Nyl.) Arnold in Flora (Regensburg) 53: 478 (1870). – *Karschia lobariella* (Nyl.) Arnold in Flora (Regensburg) 57: 103 (1874). – *Abrothallus lobariellus* (Nyl.) Zopf in Hedwigia 35: 363 (1896).

Host: *Lobaria* spec. (thallus)

Asia, Russia: Khabarovskiy Krai, Komsomolsk-De Kastri route, Khomi Mountains, c. 20 air km E of Chernyy Mys, hills on north bank of the Salasu River, 51°05'55"N / 138°46'17"E, 328 m alt.; mixed coniferous-broad-leaved mature forest, at the base of a trunk of *Picea jezoensis*.

Note: The type host of *Dactylospora lobariella* is *Lobaria pulmonaria*.

12. VII. 2009 leg. T. Spribile (30509)

Hafellner J. 2012: Lichenicolous Biota (Nos 121–150). - Fritschiana 74: 19–41.

133. *Briancoppinsia cytospora* (Vouaux) Diederich, Ertz, Lawrey & P.Boom Isoneotype

in Fungal Diversity 52(1): 8 (2011). – Bas.: *Phyllosticta cytospora* Vouaux in Bull. Soc. Mycol. France 30: 193 (1914). – Syn.: *Phoma cytospora* (Vouaux) D.Hawksw. in Trans. Brit. Mycol. Soc. 67: 56 (1976).

Host: *Lecanora conizaeoides* (thallus)

Europe, Luxembourg: N of Reckange (Mersch), Enelter Kapelle, 49°45'35"N / 6°04'42"E, c. 265 m alt., IFBL: L8.24.44; UTM: KA.81; deciduous trees near the chapel, on old trunk of *Aesculus hippocastanum*.

Note 1: According to the protologue, the type host of *Phyllosticta cytospora* is *Flavoparmelia caperata*.

Note 2: The identification of the host in the exsiccata distributed here is uncertain.

Note 3: Diederich et al. (Fungal Diversity 52(1): 1–12, 2011) have shown that the coelomycete *Briancoppinsia cytospora* is likely to be a member of the family Arthoniaceae belonging to the Arthoniales-Arthoniomycetes.

Note 4: The host is partly killed by *Athelia arachnoidea* (e.g. specimen in GZU).

in Hawksworth & Punithalingam, Trans. Brit. Mycol. Soc. 61: 67 (1973). – Bas.: *Gymnosporium physciae* Kalchbr. in Math. Term. Közlem. 3: 299 (1865). – Syn.: *Coniosporium physciae* (Kalchbr.) Sacc. in Syll. Fung. 4: 246 (1886).

Host: *Xanthoria parietina* (apothecia)

Europe, United Kingdom: Scotland, East Lothian (VC 82), Dunbar, Belhaven Bay, 56°00'6"N / 02°33'46"W, c. 5 m alt.; at edge of conifer plantation on coastal sand dunes, on twigs of *Sambucus nigra*.

Note1: *Xanthoria parietina* is the type host of the species.

Note 2: Ruibal et al. (IMA Fungus 2(1): 97–103, 2011) have shown that the dematiaceous hyphomycete *Xanthoriicola physciae* is likely to be a member of the family *Teratosphaeriaceae* belonging to the *Capnodiales*-Dothideomycetes.

Lichenotheca Graecensis, Fasc. 21 (Nos 401–420)

Walter OBERMAYER*

OBERMAYER W. 2012: Lichenotheca Graecensis, Fasc. 21 (Nos 401–420). - Fritschiana (Graz) 74: 43–48. - ISSN 1024-0306.

Abstract: Fascicle 21 of Lichenotheca Graecensis comprises 20 collections of lichens from the following countries (and administrative subdivisions): Austria (Carinthia [6]; Salzburg [3]; Styria [5]; Upper Austria [1]), Russia (Republic of Buryatia [2]; Orenburg Oblast [1]), Slovenia [1], and Uruguay (Montevideo [1]). TLC-analyses were carried out for *Cladonia uncialis* subspecies *biuncialis*, *Ochrolechia turneri*, *Trapeliopsis granulosa*, and *Usnea densirostra*.

The exsiccata series 'Lichenotheca Graecensis' is distributed on exchange basis to the following 19 public herbaria and to one private collection (herbarium abbreviations follow <http://sciweb.nybg.org/science2/IndexHerbariorum.asp>): ASU, B, C, CANB, CANL, E, G, GZU, H, HAL, HMAS, LE, M, MAF, MIN, O, PRA, TNS, UPS, Klaus KALB. A text version of Lichenotheca Graecensis can be found under <http://www.uni-graz.at/walter.obermayer/li-grz1.htm>, a pdf-file is stored under <http://www.uni-graz.at/walter.obermayer/lichenotheca-graecensis-21.pdf>. Label texts originally drafted in a local language have been translated into English by the author.

I wish to thank the following lichenologists who have made their lichen material available, particularly Josef HAFELLNER (Graz), Helmut MAYRHOFER (Graz), Héctor S. OSORIO (Montevideo), Toby SPRIBILLE (Missoula and Graz), Roman TÜRK (Salzburg), Gennadii URBANAVICHUS and Ira URBANAVICHENE (Murmansk), and Jan VONDRAK (Průhonice and Ceske Budejovice). Josef HAFELLNER, Helmut MAYRHOFER, and Christian SCHEUER kindly checked the manuscript for errors. I am indepted to Josef HAFELLNER for the determination of one lichenicolous fungus (*Asterophoma mazaediicola* on *Calicium trabinellum*) and to Leif Tibell for the confirmation of the determination of the cited lichen.

Distributed by the Institut für Pflanzenwissenschaften, Karl-Franzens-Universität, Graz (GZU)

405. **Candelariella subdeflexa** (Nyl.) Lettau

RUSSIA, Orenburg Oblast, Buzuluk district, National Park 'Buzulukskiy bor', village Partizanskiy, bank of the river Borovka, 52°59'54"N, 052°07'42"E, 80 m above sea level, on bark of *Salix*, 23 May 2009, collected and determined by Jan Vondrák (7428) & Alexander Khodosovtsev.

OBERMAYER W. 2012: **Lichenotheca Graecensis**, Fasc. 21 (Nos 401–420). - Fritschiana 74: 43–48
Distributed by the Institut für Pflanzenwissenschaften, Karl-Franzens-Universität, Graz (GZU)

406. **Cetraria sepincola** (Ehrh.) Ach.

AUSTRIA, Kärnten (=Carinthia), Saualpe, 11.7 km SW of Bad St.Leonhard, 3.6 km SSW of Klippitztörl, 750 m NNE of the summit of Forstalpe, 46°54'15"N, 014°39'56"E, 1910 m above sea level, (grid number 9053/4), windblown ridge area (E-exposed) with some crippled grown *Larix decidua* (1 m tall), on living and dead twigs of *Larix decidua*, 8 September 2012, collected and determined by Walter Obermayer (12497).

Note: Associated lichens and fungi: *Lachnellula willkommii*, *Cetraria islandica* (!), *Hypogymnia physodes*, *H. tubulosa*, *Lecanora pulicaris* s.l., *L. symmicta*, *Parmeliopsis ambigua*, *Pseudevernia furfuracea* var. *ceratea*, *P.f.* var. *furfuracea* (very few thalli), *Vulpicida pinastri*.

OBERMAYER W. 2012: **Lichenotheca Graecensis**, Fasc. 21 (Nos 401–420). - Fritschiana 74: 43–48
Distributed by the Institut für Pflanzenwissenschaften, Karl-Franzens-Universität, Graz (GZU)

407. **Cetraria sepincola** (Ehrh.) Ach.

AUSTRIA, Steiermark (=Styria), Steirisches Randgebirge, Koralpe, 15 km W of Deutschlandsberg, N above the saddle Weinebene, Handalpe (=Handalm), ridge between the summits of Handalm and Webergel, 46°50'55"N, 015°01'00"E, 1820 m above sea level, (grid number 9156/3), subalpine pasture with boulders of gneissic rocks and scattered shrubs of *Rhododendron ferrugineum*, on twigs of *Rhododendron ferrugineum*, 21 March 2012, collected and determined by Helmut Mayrhofer (19109).

OBERMAYER W. 2012: **Lichenotheca Graecensis**, Fasc. 21 (Nos 401–420). - Fritschiana 74: 43–48
Distributed by the Institut für Pflanzenwissenschaften, Karl-Franzens-Universität, Graz (GZU)

408. **Cladonia macroceras** (Delise) Hav.

SLOVENIA, Central Eastern Alps, Styrian Prealps, Kobansko, mountain top ("Jantschkifels") 7.6 km NE above Dravograd (=Unterdrauburg), W above the chapel Sv.Urbán, uppermost slopes exposed to S just below the summit, close to the border to Austria, 46°39'08"N, 015°03'49"E, 1360 m above sea level, (grid number 9356/1), scattered boulders of garnet schist on clearings in a spruce forest, on soil (amongst *Vaccinium myrtillus*), 20 July 2008, collected and determined by Josef Hafellner (71507).

Note: TLC: Fumarprotocetraric acid (specimen in GZU tested).

OBERMAYER W. 2012: **Lichenotheca Graecensis**, Fasc. 21 (Nos 401–420). - Fritschiana 74: 43–48
Distributed by the Institut für Pflanzenwissenschaften, Karl-Franzens-Universität, Graz (GZU)

409. *Cladonia uncialis* (L.) Weber ex F.H.Wigg.
subspecies *biuncialis* (Hoffm.) M.Choisy

AUSTRIA, Steiermark (=Styria), Niedere Tauern, Seckauer Tauern, 20 km NW of the centre of Knittelfeld, Hochreichart, summit area, 47°21'49"N, 014°40'55"E, 2410 m above sea level, (grid number 8654/1), alpine boulder field, on mossy layers in shaded crevices (W-exposed), 28 August 2012, collected and determined by Walter Obermayer (12495).

Note: All issued specimens were separated from one big cushion. TLC: Usnic acid, squamatic acid, fatty acid (specimen in GZU tested); surface of central canal white powdery (UV+ white).

OBERMAYER W. 2012: **Lichenotheca Graecensis**, Fasc. 21 (Nos 401–420). - Fritschiana 74: 43–48
Distributed by the Institut für Pflanzenwissenschaften, Karl-Franzens-Universität, Graz (GZU)

410. *Gowardia nigricans* (Ach.) Halonen et al.
(Syn.: *Alectoria nigricans* (Ach.) Nyl.)

AUSTRIA, Steiermark (=Styria), Niedere Tauern, Seckauer Tauern, 20 km NW of the centre of Knittelfeld, Hochreichhart, summit area, 47°21'49"N, 014°40'55"E, 2410 m above sea level, (grid number 8654/1), alpine boulder field, on mossy layers in shaded crevices (W-exposed), 28 August 2012, collected and determined by Walter Obermayer (12476).

Note: TLC: Usnic acid, norstictic acid, salazinic acid, traces of protocetraric acid, unknowns (specimen in GZU tested [apothecia included]).

Selected exsiccates of *Caloplaca*, Fasc. 3 (Nos 51–75)

Jan VONDRAK*

VONDRAK J. 2012: Selected exsiccates of *Caloplaca*, Fasc. 3 (Nos 51–75). - Fritschiana (Graz) 74: 49–57. - ISSN 1024-0306.

Abstract: Fascicle 3 of 'Selected exsiccates of *Caloplaca*' comprises 25 collections of lichens from the following countries: Bulgaria (3), the Czech Republic (1), France (2), Greece (5), Italy (1), Kazakhstan (1), Romania (1), Russia (7), Turkey (1), and Ukraine (3). Isotype material of *Caloplaca syvashica* and paratypes of *Caloplaca neotaurica* and *Caloplaca skii* are distributed. All samples were identified by the author. ITS fingerprinting was carried out on the following collections: 51. *Caloplaca aractina*, 52. *Caloplaca arnoldii* subsp. *arnoldii*, 54. *Caloplaca communis*, 55. *Caloplaca concreticola*, 57. *Caloplaca diphyodes*, 64. *Caloplaca lucifuga*, and 68. *Caloplaca obscurella*.

The exsiccate collection 'Selected exsiccates of *Caloplaca*' is aimed at the distribution of samples of the genus *Caloplaca* (Teloschistales, lichenized fungi) from all over the world. Although modern molecular phylogenetic studies find the genus *Caloplaca* paraphyletic, the classical conception used in most recent checklists is followed here.

'Selected exsiccates of *Caloplaca*' is distributed on exchange basis to the following 15 herbaria and private collections: ASU, B, C, CANB, CBFS, F, GZU, H, LE, M, MIN, PRA, TNS, UPS, herb. Lendemer (herbarium acronyms are listed in the Index Herbariorum site <http://sweetgum.nybg.org/ih/>). Contributions to this exsiccate collection are welcome.

Abbreviations of authors of plant names are taken from <http://www.ipni.org/index.html>. Names of countries and regions are given in English. Names of municipalities are in local languages, but names in Cyrillic are phonetically transcribed to the Latin alphabet.

51. ***Caloplaca aractina* (Fr.) Häyrén (1914)**

Bas.: *Parmelia aractina* Fr. (1825)

ITALY. Sardinia: Santa Teresa Gallura, coastal cliffs N of the town, alt. 0–30 m, 41°14'50"N, 9°11' 36"E.

Saxicolous on horizontal, sun-exposed faces of coastal rocks, in supralittoral zone.

Notes: Costal populations of Atlantic and W-Mediterranean regions are morphologically similar to inland populations, recently called *Caloplaca viridirufa*, but their ecology is quite different: exposed rock faces in coastal habitats versus sheltered rock faces in inland habitats. Also ITS phylogeny separates coastal and inland populations into different clades (unpublished).

54. *Caloplaca communis* Vondrák, Říha, Arup & Søchting (2009)

KAZAKHSTAN. Mangistau region: Tupkaragan district, Caspian Sea coast, between Fort Shevchenko and Aktau, village Saura, rocky valley of the river Saura, alt. 0–100 m, 44°13' 53"N, 50°48'13"E.

Saxicolous on soft limestone coastal cliff.

Notes: *Caloplaca communis* is one of the few maritime lichens at coastal rocks of the Caspian Sea. The ITS sequence of the Caspian sample is identical with some of the Black Sea coast.

57. *Caloplaca diphyodes* (Nyl.) Jatta (1900)

Bas.: *Lecanora diphyodes* Nyl. (1872)

RUSSIA. Orenburg region: surroundings of the water reservoir “Irikinskoe vodo-khranilishche”, village Chapaevka, limestone rocks on the opposite slope of the lake NW of the village, alt. 270–290 m, 52°5'14"N, 58°48'9"E.

Saxicolous on E-exposed, slightly inclined limestone rocks in steppe.

Notes: In Northern Europe or in other European mountain regions, *Caloplaca diphyodes* rarely occurs on siliceous rocks close to rivers or lakes, but the same species is very common on dry and sunny limestone outcrops on the foothills of the SE Ural. ITS and β-tubulin sequences unite European and Ural populations into one clade (unpublished).
