Universidade de Lisboa)**

“Relativistic Point-Form Approach to Hadrons”

I address approaches of relativistic Hamiltonian dynamics and concentrate specifically on applications of point-form relativistic quantum theory to hadron physics. A variety of processes involving hadrons such as the pion dressing of baryons, lepton-hadron scattering and semi-leptonic decays can be described within a relativistic multichannel framework. Results for strong, electroweak, and transition form factors of hadrons are compared with corresponding experimental data.

Zeit: Friday, 30.09.2022, 10:00 Uhr

Ort: HS 05.12, Universitätsplatz 5
