

# Stefan BORSKY

## CURRICULUM VITAE

---

Stefan Borsky is an associate professor of economics at the Wegener Center for Global and Climate Change at the University of Graz, an affiliated research fellow at the Regional Economics Applications Laboratory at the University of Illinois at Urbana-Champaign, USA, and an associated member of the field of excellence Climate Change Graz. He received his Ph.D. in Economics in 2011 at the University of Innsbruck, Austria. His research interests are environmental economics, urban and regional economics, and development economics, focusing on climate change impact analysis and spatial econometric application. Before he came to the University of Graz, he was a postdoctoral researcher and assistant professor at the Department of Environmental and Business Economics at the University of Southern Denmark in Denmark between 2011 and 2016. In 2018 he was a visiting research scholar at the Regional Economics Applications Laboratory at the University of Illinois at Urbana-Champaign in the USA, and in 2019 visiting research scholar at the Institute of Social Economic Research, Osaka University, Japan. His research has been published in internationally renowned scientific journals such as Land Economics, Environmental and Resource Economics, European Journal of Political Economy, Journal of the Association of Environmental and Resource Economists, Journal of Environmental Management, etc. He regularly presents his research at international and national conferences and research seminars.

In his research career until today, Stefan Borsky has made several empirical contributions to the literature on international trade in raw materials, international environmental agreements, and weather-induced economic shocks. His research focus is primarily on the spatial interdependencies between individuals and regions. His paper on spatial interaction in compliance with an international fisheries agreement was published as a lead paper in the leading field journal of his core discipline - environmental economics. His article on zoonotic disease transmission received the 2021 Outstand Publication Award issued by the European Association of Environmental and Resource Economists. His paper on the spatial transmission of institutional corruption was awarded the 2021 Yu Chen Memorial Publication Award from the University of Graz.
